Sorry, something went wrong.

We're working on getting this fixed as soon as we can.

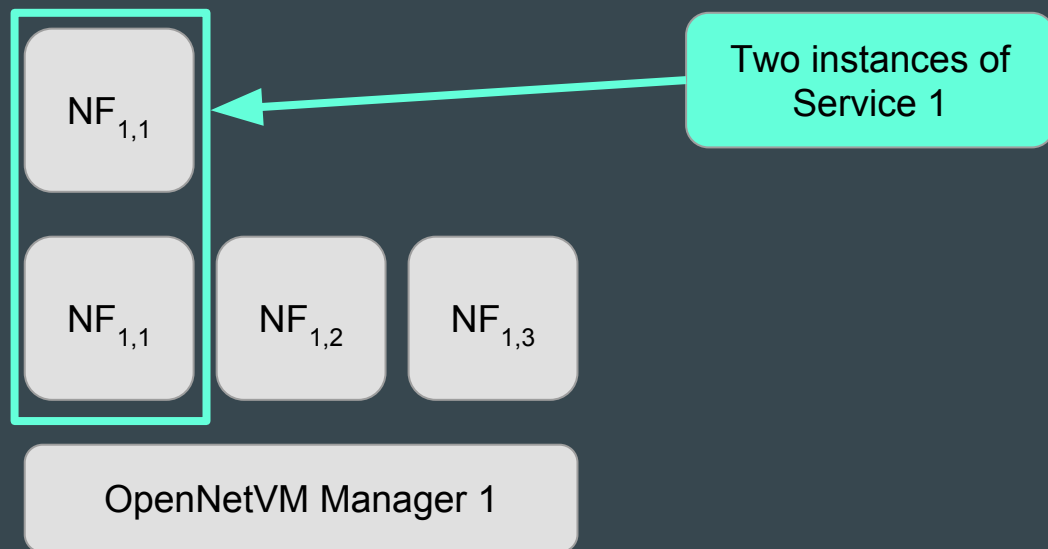

all of our servers are busy right now

please try again in a minute

(error code: 503)

Solution: Network Function Virtualization

- Abstract networking “building blocks” into software
- Can run multiple “building blocks” (services) on a single machine

Scaling is Expensive.

Software Defined Networking

Traditional Network		NFV Network	
Cisco Nexus 9000 (SDN Enabled Switch)	\$80,000	Cisco Catalyst 4948 (10G Switch)	\$1,000
		Dell PowerEdge R330	\$1,000
		Intel x520 NIC	\$200
Total:	\$80,000	Total:	\$2,200

35% Cheaper

Load Balancing

Traditional Network		NFV Network	
F5 VE-10G (Load Balancer)	\$30,000	Dell PowerEdge R330	\$1,000
		Intel x520 NIC (5x)	\$1,000
Total:	\$30,000	Total:	\$2,000

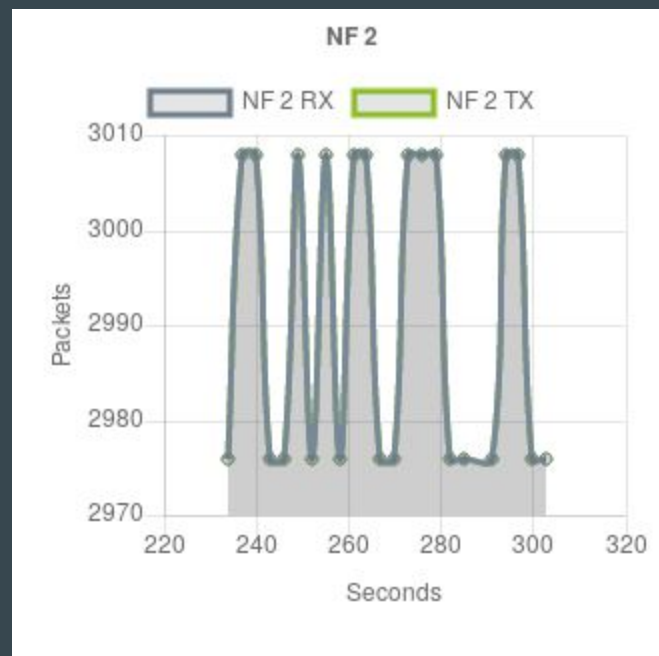

14% Cheaper

Scaling *was* Expensive.

No Performance Loss.

NF 1

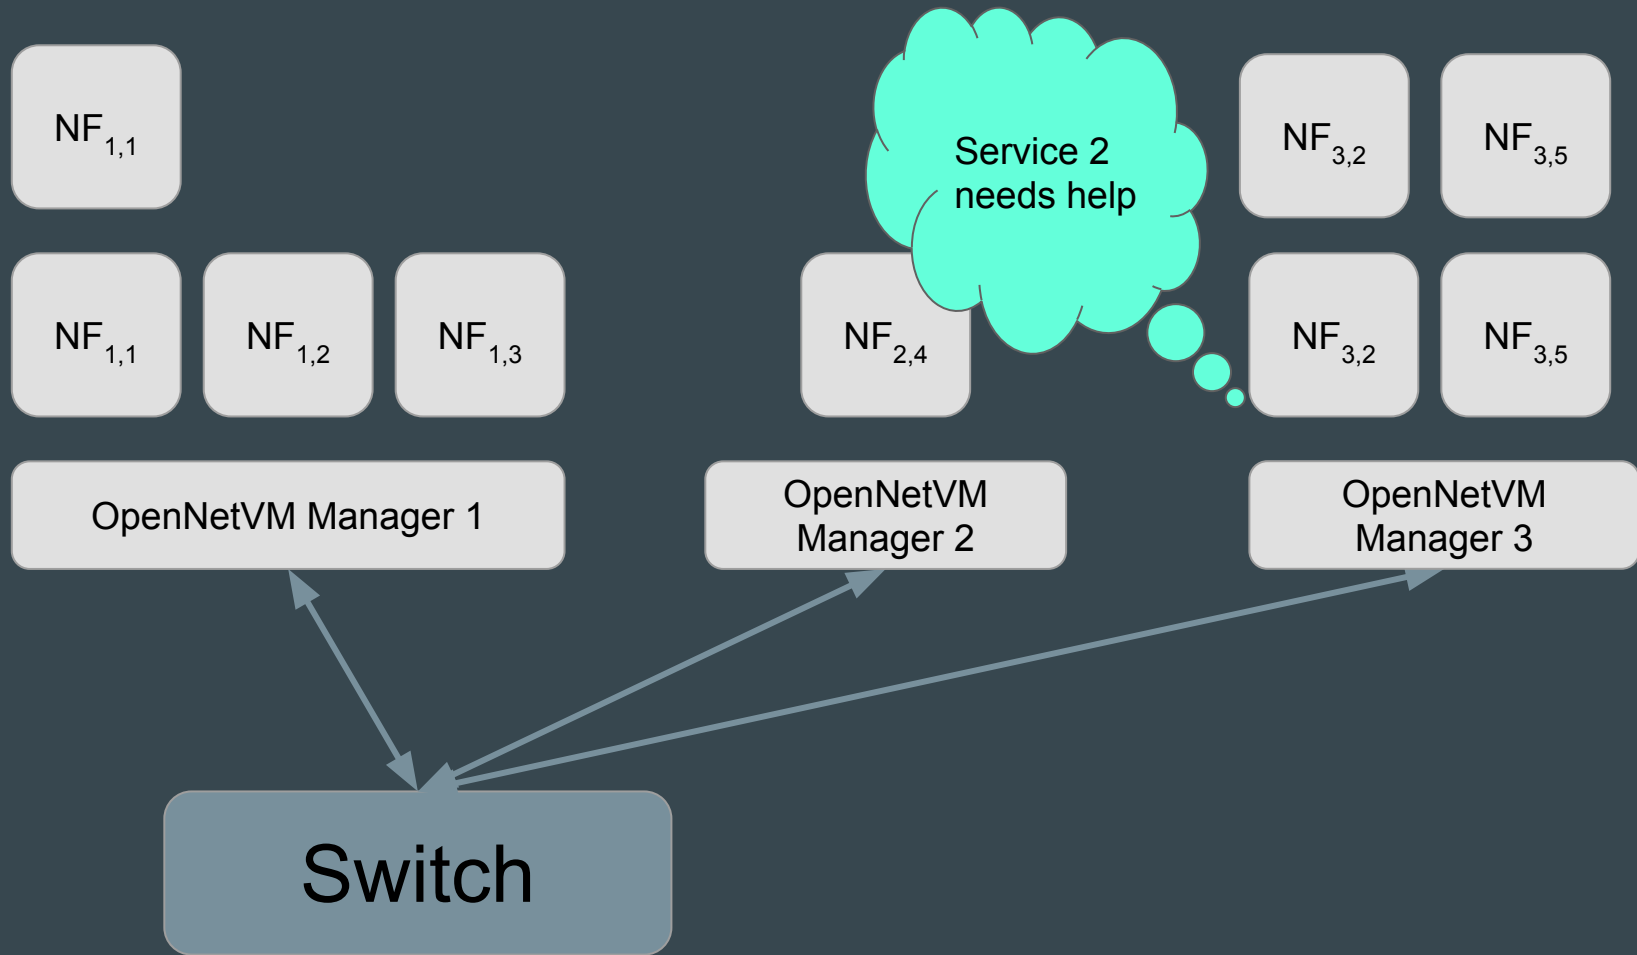

Scaling is Hard.

Scaling is Hard.

... So do it insta-magically!
